EDUCATION

Banking and Financial	Open University	Sep 2020 – Present
-----------------------	-----------------	--------------------

TECHNICAL SKILLS

- **Programming Languages:** Python, R, SQL.
- **Tools & Platforms:** Power BI, DAX, SQL Server Management Studio, Visual Studio Code, RStudio, Navicat, Microsoft Office 365.

EXPERIENCE

Investment consulting	FPT Securities	June 2023 – Dec2023
-----------------------	----------------	---------------------

Investment consulting Intern (06/2023 – 12/2023)

Learned and applied fundamental analysis and technical analysis to evaluate market trends and stocks.

- Assisted with market updates, stock screening, and investment idea generation.
- Performed basic fundamental and technical analysis for listed companies.
- Supported advisors in preparing daily reports and client investment recommendations.
- Learned and applied tools such as FireAnt, TradingView, and Excel for market tracking.

Data Analyst	BeQ Holdings	June 2024 – Present
--------------	--------------	---------------------

Financial Data Analyst Intern (6/ 2024 – 8/2024)

Learned and applied R and Python for financial data analysis.

- Started learning R and familiarized with core libraries (rvest, httr, lubridate,...).
- Preprocessed 1M+ rows of time series data using data.table, handling missing values, outliers, and duplicates to improve data accuracy by 25%.
- Automated report generation using R scripts, generating weekly dashboards for 50+ indices with rolling 6 months and 6 years return metrics.
- Crawled and cleaned financial data (e.g. MetaTrader,..) from public sources using Python (requests, BeautifulSoup, pandas) to collect and enhance index analysis.
- Implemented outlier filtering logic (e.g. MAXABSRT threshold), enhancing data quality by removing abnormal returns.(over 85% will be considered)
- Used Navicat to load processed financial data into the dashboard database, and wrote custom SQL queries to validate, transform, and extract insights for reporting and modeling.

Financial Data Pipeline (8/2024 – Present)

Developed a pipeline to process financial data (OHLC, volume, market cap) for investment indicators (GICS and ICB, Volatility, World Indexes).

- Scraped data from Yahoo Finance, Reuters, and others using Python (BeautifulSoup, yfinance) or R (rvest, httr, xml2), adapting to dynamic APIs.
- Cleaned data to ensure 99% completeness, resolving 80% of price discrepancies and null values.
- Developed SQL queries to extract data for visualization on an internal dashboard, enabling real- time investment insights.
- Computed daily and intraday indicators to support real-time investment analysis.

PERSONAL PROJECTS

Financial report analysis of VN index securities industry (8/2023 – 05/2024)

- Scraped data from Cafef, Vietstocks, and others using Python, R adapting to dynamic APIs.
- Cleaned data to ensure 99% completeness, resolving 80% of price discrepancies and null values.
- Use Power BI to visualize data and report over the years.
